Applications:

Incorporation into DNA by **PCR** with family B polymerases (Pwo, Deep Vent *exo*⁻ or KOD XL)^[1,2]

Incorporation into DNA by **Primer Extension** with family A polymerase *Taq* and family B polymerases (Pwo, Deep Vent *exo*⁻ or KOD XL)^[1]

The resulting ethynyl-functionalized DNA can subsequently be processed via Cu(I)-catalyzed click chemistry that offers the choice

- to introduce a Biotin group (via Azides of Biotin) for subsequent purification tasks
- to introduce fluorescent group (via Azides of fluorescent dyes) for subsequent microscopic imaging
- to crosslink the DNA to Azide-functionalized biomolecules e.g. proteins

Presolski *et al.*^[3] and Hong *et al.*^[4] provide a general protocol for Cu(I)-catalyzed click chemistry reactions that may be used as a starting point for the set up and optimization of individual assays.
